

Flexible lane safety – whenever and wherever you need it.

WINGS

TECHNICAL SPECIFICATIONS

- Independently operated wings for flexible lane closure (1–3 lanes)
- Compatible with all Verdegro Truck Mounted Attenuators (TMAs)
- Robust construction designed for roadwork environments
- Quick deployment and easy operation
- Customization available to suit specific project requirements (optional)

WHAT ARE VERDEGRO'S WINGS?

The Wings (add-on) is a versatile extension for your Truck Mounted Attenuator (TMA), designed to temporarily block one to three lanes at a time, providing enhanced safety for road construction workers. Each wing can be operated independently, giving you the flexibility to adjust lane closures according to the specific requirements of your project.

By combining safety and operational efficiency, the Wings helps protect workers while maintaining smooth traffic flow. This product is part of Verdegro's range of custom solutions, crafted to meet the unique needs of our clients. For more information about this or other custom options, please contact us to explore the possibilities.
